Intelliecheck Mobilisa’s TWIC Readers Added to TSA’s Approved Product List

Company’s Devices Are First Mobile Readers of TWIC Cards Approved by TSA

PORT TOWNSEND, WA – July 29, 2013 -- Intelliecheck Mobilisa, Inc. (NYSE MKT: IDN), a global leader in identity solutions and wireless security systems, announced that its TWIC Reader Plus Models IM2610 and IM2620 have become the first mobile readers of TWIC cards to be approved by the Transportation Security Administration (TSA).

James Orgill, TSA’s TWIC Qualified Technology List (QTL) Program Manager, stated Friday in a letter to Intelliecheck Mobilisa that “[your products] successfully completed each of the 140 QTL scenarios and will be included in a published list.” That list is published on TSA’s website at:

Dr. Nelson Ludlow, CEO of Intelliecheck Mobilisa, said, “TSA has created a robust ID security system at port facilities by requiring the use of TWIC cards. We call our product ‘TWIC Plus’ as it not only reads TWIC cards but also scans driver’s licenses and military IDs, matches person-of-interest lookups with law enforcement lists and authorized lists, and is capable of integrating with existing port security systems. Both the lighter and smaller Model IM2610 and the more ruggedized Model IM2620 incorporate these features, which were not contained in our previous TWIC readers.”

TWIC is an initiative of the TSA and U.S. Coast Guard to provide tamper-resistant biometric identification cards to port facility workers. The U.S. government has given guidance this year that approximately 550 locations will require QTL-approved TWIC readers and approximately 1,500 locations are on the “recommended” list for QTL-approved TWIC readers. Intelliecheck’s TWIC readers are currently in use at major ports on both coasts.

The IM2610 sells for $5,200 and the IM2620 sells for $5,470. Photographs of both models are included in this press release.
About Intellicheck Mobilisa

Intellicheck Mobilisa is a leading technology company providing wireless technology and identity systems for various applications, including mobile and handheld access control and security systems for the government, military and commercial markets. Products include the Fugitive Finder system, an advanced ID card access control product currently protecting military bases and secure federal locations; ID Check, a patented technology that instantly reads, analyzes, and verifies encoded data in magnetic stripes and barcodes on government-issued IDs, designed to improve the Customer Experience for the financial, hospitality and retail sectors currently at several Fortune 500 companies; and barZapp™, an ID-checking mobile app that allows a user’s smartphone to check an ID card particularly for age-related purchases.
